Body Mount Kit

Part #4118

1...Use four of the flat mounting plates and the four pcs. of 5/16" tubing to attach the roof section of the car to the top of the roll cage. The flat mounting plates are welded on steel panels and pop riveted on fiber glass panels to hold in place until finished. The rivets are removed when finished and the plates are fiber glassed in place.

2...The last four flat mounting plates and the 7/16" tubing are used to mount the rear quarter panels to the chassis. Mount one plate high up on the quarter panel to support the weight and one low to keep it from moving in and out. Use two pcs. of tubing on the top mounting plate to form a triangle. And one pc. on the bottom plate.
